

Mach7 Technologies
Frost & Sullivan Award Analyst Quote
2021 Global Enterprise Imaging Solutions Product Leadership Award

Mach7 Technologies' focus on strategy and innovation coupled with continued enhancement of its customer value is evidenced by its integrated health IT offerings in the medical imaging informatics space. Driving the shift from legacy departmental PACS to an enterprise-wide imaging system, Mach7 offers differentiated value with a feature-rich zero footprint universal diagnostic viewer (eUnity platform) and a vendor neutral archive & communication workflow engine that empowers interoperability. Together, these components allow health systems to build and transform their enterprise imaging strategies and ecosystems.

Mach7's product innovations and strategic framework allows for the flexibility to deploy as a full end-to-end enterprise imaging solution or independently with seamless integration to 3rd party health systems. This ensures healthcare organizations fully leverage their existing IT investments. In addition, its recent strategic partnerships enable the adoption of an AI applications marketplace to improve clinical workflow efficiency and diagnostic confidence. Mach7's approach to Mergers & Acquisitions (M&A) and Business-to-Business (B-B) partnerships has perceived a successful shift in acquiring more business-to-consumer opportunities and market penetration into new and expanding markets that have yet to fully adopt mature digital imaging strategies.
